IN THE CLAIMS:

Please amend claim 1 as follows:

<sup>A2</sup> 1. (Amended) An injection-moulding device for injection moulding of plastic objects, comprising a mould which defines a mould cavity, in which mould is provided a flow channel for the at least partially liquid plastic, which flow channel extends through a manifold and a number of nozzles connected to the manifold, wherein the flow channel contains a number of transverse separating surfaces between structural components, and at least one transverse separating surface is bridged by a sealing element in the flow channel, wherein the sealing element is provided clampingly on the structural components.
